

# LatinX Survivors with Disabilities

- LatinX communities have high rates of nondisclosure of sexual assault – period.
- Sex, rape, and abuse often are not discussed in LatinX communities.
- Considering traditional beliefs about marriage is important, since this may contribute to survivors' unwillingness to report sexual violence.
- With cultural barriers about disclosing sexual violence, survivors of LatinX communities who have disabilities face even more challenges.
- Arc NM Sexual Assault advocates can help provide disability-informed support while honoring the person's culture and unique considerations!
